Patient Information

Your patch test result indicates that you have a contact allergy to prednicarbate. This contact allergy may cause your skin to react when it is exposed to this substance, although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is prednicarbate found?

Prednicarbate is a structural Class D2 corticosteroid used in prescription topical ointments and creams.

How can you avoid contact with prednicarbate?

Avoid products that list the following in the ingredients:
- \((11\beta)-17\text{-}(\text{ethoxycarbonyl})\text{oxy}\text{-}11\text{-hydroxy}\text{-}3,20\text{-dioxopregna-1,4-dien-21-yl} \text{propionate}\)
- \((11\beta)-17\text{-}(\text{Ethoxycarbonyl})\text{oxy}\text{-}11\text{-hydroxy}\text{-}21\text{-}(1\text{-oxopropoxy})\text{pregna-1,4-diene}-3,20\text{-dione}\)

What are some products that may contain prednicarbate?

- Medications:
  - Creams
  - Ointments
- You may also react to topical medications that contain:
  - Hydrocortisone buteprate
  - Hydrocortisone butyrate
  - Hydrocortisone valerate
- And topical medication that contain structurally related Class A corticosteroids like:
  - Hydrocortisone
  - Hydrocortisone acetate
  - Methylprednisolone

*These lists are brief and provide just a few examples. They are not comprehensive. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.*
