Patient information

Your patch test result indicates that you have a contact allergy to fragrance mix. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching and fluid-filled blisters.

Where is fragrance mix found?

Fragrance mix contains eight fragrances: Geraniol, Cinnamaldehyde, Hydroxycitronellal, Cinnamyl alcohol, alpha-Amylcinnamaldehyde, Isoeugenol, Eugenol, and Oak moss, and the excipient sorbitan sesquioleate. Fragrances can be found in most products. They are used to add flavor or scent to a product or may mask a product’s unpleasant smell. They may come from natural (animals or plants) or synthetic sources.

How can you avoid contact with fragrance mix?

Avoid products that list any of the following names in the ingredients:
- alpha-amylcinnamaldehyde
- Amyl cinnamal
- Amylcinnamaldehyde
- Cinnamal
- Cinnamaldehyde
- Cinnamic alcohol
- Cinnamic aldehyde
- Cinnamyl alcohol
- Eugenol
- Evernia prunastri
- Geraniol
- Hydroxycitronellal
- Isoeugenol
- Oak moss
- Oakmoss absolute resin
- Oakmoss concrete
- Oakmoss oil or extract
- Sorbitan sesquioleate

What are some products that may contain fragrance mix?

**Personal Care & Hygiene Products**
- Baby Products
- Bath Oils
- Cosmetics:
  - Aftershaves
  - Colognes
  - Perfumes
  - Soaps
  - Tonics
- Hair Care
- Lotions/Creams
