 Patient Information
Your patch test result indicates that you have a contact allergy to shellac. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is shellac found?
Shellac is a resin sold in the form of amber flakes and is considered a natural plastic. This substance can be found in products used throughout the home including paint primers, sealants, and furniture finishes. It is also edible and used as a glazing agent on candies and pills. Shellac has other uses such as producing dentures and for creating a waxy substance found in cosmetics.

How can you avoid contact with shellac?
Avoid products that list any of the following names in the ingredients:
- Candy glaze
- Confectioner's glaze
- EINECS 232-549-9
- Gum lac
- Lac resin
- Lacca
- Resins, lac or shellac
- Schellack
- Shellac, purified
- Shellac orange S-40
