Patient Information

Your patch test result indicates that you have a contact allergy to oleamidopropyl dimethylamine. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is oleamidopropyl dimethylamine found?
This product is used in cosmetics, baby lotions and body lotions, and shampoos.

How can you avoid contact with oleamidopropyl dimethylamine?
Avoid products that list any of the following names in the ingredients:

- Dimethylaminopropyl oleamide
- EINECS 203-661-5
- NSC 258347
