Patient Information

Your patch test result indicates that you have a contact allergy to promethazine-HCL. This contact allergy may cause your skin to react when it is exposed to this substance although it may take several days for the symptoms to appear. Typical symptoms include redness, swelling, itching, and fluid-filled blisters.

Where is promethazine-HCL found?

Promethazine-HCL is found in medications used to treat or prevent nausea, vomiting, motion sickness, and allergies.

How can you avoid contact with promethazine-HCL?

Avoid products that list any of the following names in the ingredients:

- (+)-(2-(Dimethylamino)propyl)phenothiazine monohydrochloride
- 10-(2-(Dimethylamino)propyl)phenothiazine monohydrochloride
- 10-(2-Dimethylamino-1-propyl)phenothiazine hydrochloride
- 10-(2-Dimethylaminopropyl)phenothiazine hydrochloride
- 10-(3-Dimethylaminoisopropyl)phenothiazine hydrochloride
- 10H-Phenothiazine-10-ethanamine, N,N,alpha-trimethyl-, monohydrochloride
- 10H-Phenothiazine-10-ethanamine, N,N,alpha-trimethyl-, monohydrochloride, (+)-

What are some products that may contain promethazine-HCL?

Medications for the following:
- Allergies
- Motion sickness
- Nausea

*For additional information about products that might contain promethazine-HCL, go to the Household Product Database online (http://householdproducts.nlm.nih.gov) at the United States National Library of Medicine. These lists are brief and provide just a few examples. They are not comprehensive. Product formulations also change frequently. Read product labels carefully and talk to your doctor if you have any questions. These are general guidelines. Talk to your doctor for more specific instructions.
